

A note from the student behind this lab

This is an **independent, free, learning-only student project**. It respects every company and vendor, and every trademark belongs to its owner. It is **not affiliated with or endorsed by** any of them.

If anyone has a concern, the content will be removed or corrected promptly: please write via https://cyphermonkeylabs.com/#contact. Nothing here is sold, and I am happy to volunteer for any organization.

SIP trunk checklist

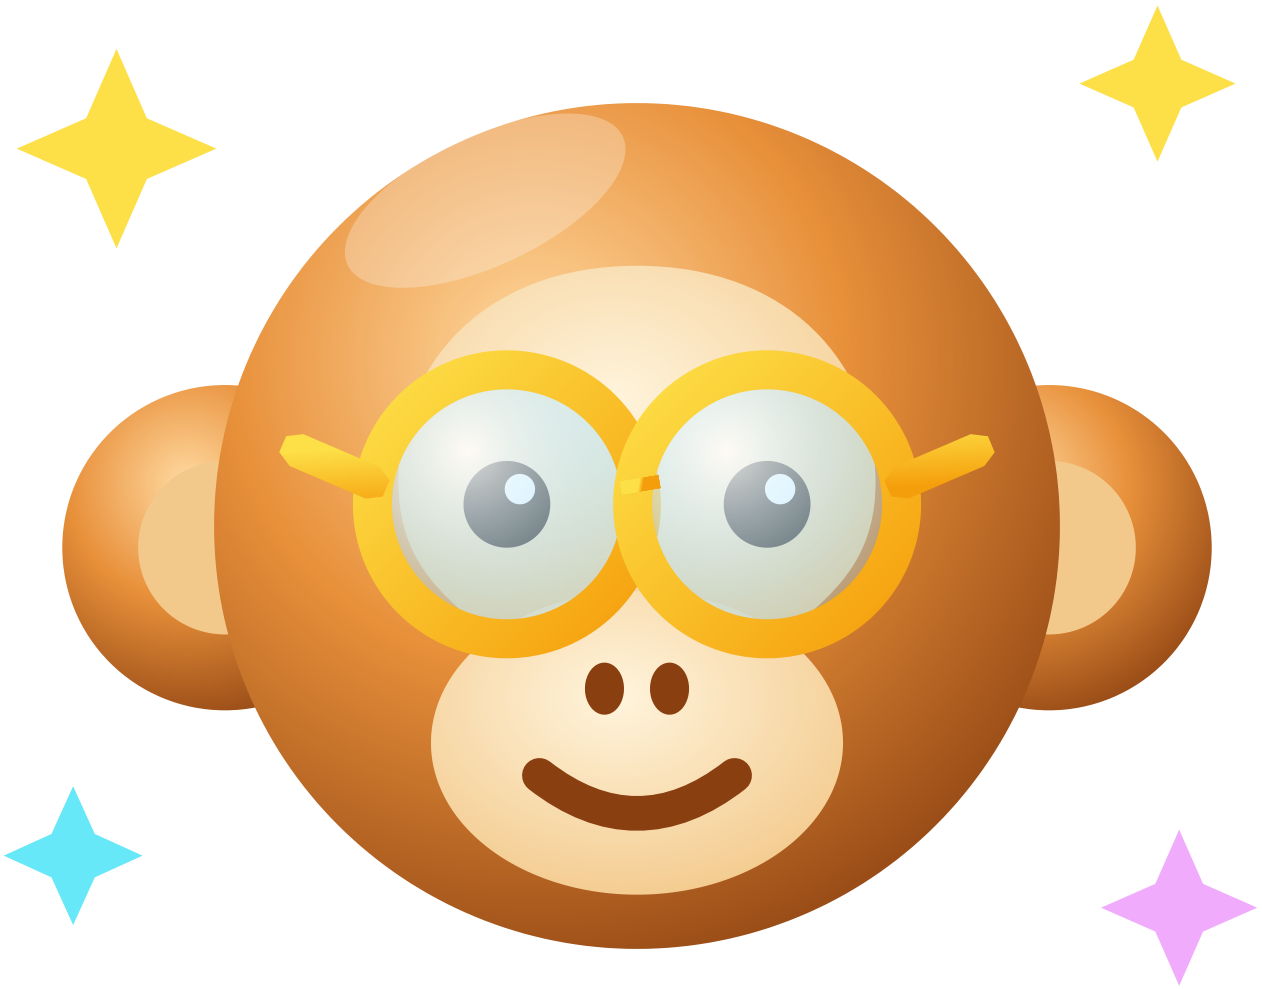

1. Name the transport the peer documents.
2. Name the Request-URI and whether DNS must resolve it.
3. Compare the offer codecs with the answer.
4. Check c= and the RTP port with a capture.
5. Record the emergency test number the provider gave you. This sheet is not legal advice.

Confirm before relying on a vendor default that is not printed here.
